Website	www.structo.ee

PRODUCT IDENTIFICATION

Product name	Glass Doors: PORTA-53G ALUSLIDE-12
Place(s) of production	Estonia

Jessica Karhu
RTS EPD Committee secretary

Laura Apilo
Managing Director

The Building Information Foundation RTS sr

EPDs within the same product category but from different programmes may not be comparable.

EPD INFORMATION

The EPD owner has the sole ownership, liability, and responsibility for the EPD. EPDs of construction products may not be comparable if they do not comply with EN 15804 and if they are not compared in a building context.

EPD program operator	The Building Information Foundation RTS sr/ Building Information Ltd Malminkatu 16 A,
EPD standards	This EPD is in accordance with EN 15804+A2 and ISO 14025 standards.
Product category rules	The CEN standard EN 15804 serves as the core PCR. In addition, the RTS PCR (English version, 26.8.2020) is used.
EPD author	Mari Kirss and Anni Oviir Rangi Maja OÜ Tondi 22-4, Tallinn Estonia www.lcasupport.com
EPD verification	Independent verification of this EPD and data, according to ISO 14025: <input type="checkbox"/> Internal certification <input checked="" type="checkbox"/> External verification
Verification date	5 August 2021
EPD verifier	Silvia Vilčeková, Silcert, s.r.o.
EPD number	RTS_143_21
Publishing date	07.09.2021
EPD valid until	16.08.2026

PRODUCT INFORMATION

PRODUCT DESCRIPTION

PORTA-53G is a glass door with aluminum frame.
ALUSLIDE-12 is a glass sliding door with top rail.

PRODUCT APPLICATION

Glass doors are interior elements that are mainly used in office buildings. They can be combined with different glass walls to create exciting and functional results.

PHYSICAL PROPERTIES OF THE PRODUCT

Product properties can be found on the manufacturer website at www.structo.ee

TECHNICAL SPECIFICATIONS

For this assessment one square meter of product shall be used.

Product	Width, mm	Height, mm	Door frame width, mm	Door frame height, mm	Element thickness, mm	Weight, kg
PORTA-53G	-	-	925	2259	54	30
ALUSLIDE-12	1030	2304	-	-	48	27

ADDITIONAL TECHNICAL INFORMATION

Further information can be found at www.structo.ee

SUBSTANCES, REACH - VERY HIGH CONCERN

The product does not contain any REACH SVHC substances in amounts greater than 0,1% (1000 ppm).

PRODUCT RAW MATERIAL COMPOSITION

TOTAL	100	100	

PRODUCT LIFE-CYCLE

MANUFACTURING AND PACKAGING (A1-A3)

PORTA-53G production begins with unpacking the raw materials. After that, the profiles are processed, get the selected finish and are sent to the assembly line. When the glass panels have arrived from the suppliers, the profiles are assembled into door panels and frames. Hardware and seals will be fixed to the door panels and frames. Before packing and stacking the door panels to transportation pallets, final quality checks will be conducted and the products will be ready for transportation to the construction site.

ALUSLIDE-12 production begins with unpacking the raw materials. After that, the profiles are processed, get the selected finish and are sent to the assembly line. When the glass panels have arrived from the suppliers, the profiles are assembled into door panels. Hardware and rollers will be fixed to door panels and guide rails will be assembled. Before packing and stacking the doors to transportation pallets, final quality checks will be concluded and the finished product will be sent to the construction site.

MANUFACTURING PROCESS:

TRANSPORT (A4)

Transportation impacts occurred from final product's delivery to construction site cover direct exhaust emissions of fuel, environmental impacts of fuel production, as well as related infrastructure emissions.

PRODUCT END OF LIFE (C1-C4, D)

At the end-of-life, in the demolition phase end-of-life product is collected as mixed waste (C1) and is assumed to be sent (C2) to recycling (C3). Less than 1% is sent to landfill (C4). Due to the recycling potential of aluminum, some of the end-of-life product is converted into recycled raw materials (D).

LIFE-CYCLE ASSESSMENT

LIFE-CYCLE ASSESSMENT INFORMATION

Period for data	2020
-----------------	------

DECLARED AND FUNCTIONAL UNIT

Declared unit	1 m ²
Mass per declared unit	27 - 30 kg

BIOGENIC CARBON CONTENT

Product's biogenic carbon content at the factory gate

Biogenic carbon content in product, kg C	7.13
Biogenic carbon content in packaging, kg C	0.72 - 0.79

SYSTEM BOUNDARY

This EPD covers the cradle to gate with options scope with following modules; A1 (Raw material supply), A2 (Transport) and A3 (Manufacturing), A4 (Transport), as well as C1 (Deconstruction), C2 (Transport at end-of-life), C3 (Waste processing) and C4 (Disposal). In addition, module D - benefits and loads beyond the system boundary is included.

Product stage			Assembly stage					Use stage					End of life stage				Beyond the system boundaries

---------------	-----------	---------------	-----------	----------	-----	-------------	--------	-------------	---------------	------------------------	-----------------------	------------------------	-----------	------------------	----------	-------	----------	-----------

Modules not declared = MND

LIFE CYCLE STAGES DIAGRAM:

CUT-OFF CRITERIA

The study does not exclude any modules or processes which are stated mandatory in the EN 15804:2012+A2:2019 and the applied PCR. The study does not exclude any hazardous materials or substances.

The study includes all major raw material and energy consumption. All inputs and outputs of the unit processes, for which data is available for, are included in the calculation. There is no neglected unit process more than 1% of total mass or energy flows. The module specific total neglected input and output flows also do not exceed 5% of energy usage or mass.

ALLOCATION

Allocation is required if some material, energy, and waste data cannot be measured separately for the product under investigation.

In this study, as per EN 15804, allocation is conducted in the following order;

1. Allocation should be avoided.
2. Allocation should be based on physical properties (e.g. mass, volume) when the difference in revenue is small.
3. Allocation should be based on economic values.

Allocation used in Ecoinvent 3.6 environmental data sources follows the methodology 'allocation, cut-off by classification'. This methodology is in line with the requirements of the EN 15804 -standard.

ESTIMATES AND ASSUMPTIONS

This LCA study is conducted in accordance with all methodological considerations, such as performance, system boundaries, data quality, allocation procedures, and decision rules to evaluate inputs and outputs. All estimations and assumptions are given below:

Module A4: The transportation distance is defined according to RTS PCR. It was assumed that typical installation place is situated in Stockholm, Sweden. Average distance of transportation from production plant to building site is equal to 460 km. Transportation method is assumed to be ferry and lorry. The transportation doesn't cause losses as products are packaged properly. Also, volume capacity utilisation factor is assumed to be 1 for the nested packaged products.

Module C1: Energy consumption of demolition process is on the average 0 kWh/m². It is assumed no machinery is needed for the process.

Module C2: It is estimated that there is no mass loss during the use of the product, therefore the end-of-life product is assumed that it has the same weight with the declared product. All of the end-of-life product is assumed to be sent to the closest facilities such as recycling and landfill. Transportation distance to the closest disposal area is estimated as 15 km and the transportation method is assumed as lorry which is the most common.

Module A2, A4 & C2: Vehicle capacity utilization volume factor is assumed to be 1 which means full load. In reality, it may vary but as role of transportation emission in total results is small and so the variety in load assumed to be negligible. Empty returns are not taken into account as it is assumed that return trip is used by transportation company to serve needs of other clients.

Module C3: It is assumed that over 99% of total waste is recycled or incinerated for heat production. This assumption was based on information from industry associations. App. 95% of metals, 70% of glass is recycled. 98% of other waste is incinerated for heat generation. The process losses of the waste treatment plant are assumed to be negligible.

Module C4: The remaining less than 1% of is assumed to be sent to landfill.

Module D: The recycled end-of-life product is assumed to be converted into a raw material after recycling.

ENVIRONMENTAL IMPACT DATA

Note: ENVIRONMENTAL IMPACTS - EN 15804+A1, CML / ISO 21930 are presented in annex.

CORE ENVIRONMENTAL IMPACT INDICATORS – EN 15804+A2, PEF

- 1) GWP = Global Warming Potential; EP = Eutrophication potential; POCP = Photochemical ozone formation; ADP = Abiotic depletion potential.
- 2) EN 15804+A2 disclaimer for Abiotic depletion and Water use and optional indicators except Particulate matter and Ionizing radiation, human health. The results of these environmental impact indicators shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.
- 3) Required characterisation method and data are in kg P-eq. Multiply by 3,07 to get PO4e.

ABOUT THE MANUFACTURER

All our products are manufactured according to the customer's individual requirements. As a result, our products fit perfectly in the designated interior space and comply with all requirements of the building. Structo's products are practical, of high quality and stylish.

Not only do we manufacture products that look good, we also make them practical, long lasting and easy to handle. It is our greatest aim to provide all present and future customers with the satisfaction that can be guaranteed by our extensive experience and professional expertise.

Structo's products are characterised by innovative ideas and immaculate workmanship. Our constant product development makes sure you will get the best solutions for even your most complicated requirements.

EPD AUTHOR AND CONTRIBUTORS

Manufacturer	Structo Group OÜ
EPD author	Mari Kirss and Anni Oviir, Rangi Maja OÜ
EPD verifier	Silvia Vilčeková, Silcert, s.r.o.
EPD program	The Building Information Foundation RTS sr
Background data	This EPD is based on Ecoinvent 3.6 and One Click LCA databases.
LCA software	One Click LCA
